Laboratory Component 10:

Design, Develop and Implement a menu driven Program in C for the following operations on Binary Search Tree (BST) of Integers
a. Create a BST of N Integers: 6, 9, 5, 2, 8, 15, 24, 14, 7, 8, 5, 2
b. Traverse the BST in Inorder, Preorder and Post Order
c. Search the BST for a given element (KEY) and report the appropriate messaged.
d. Exit

```
#include<stdio.h>
#include<stdlib.h>
struct BST
{
	int data;
	struct BST *lchild;
	struct BST *rchild;
};
typedef struct BST * NODE;

NODE create()
{
	NODE temp;
	temp = (NODE) malloc(sizeof(struct BST));
	printf("\nEnter The value: ");
	scanf("%d", &temp->data);

	temp->lchild = NULL;
	temp->rchild = NULL;
	return temp;
}

void insert(NODE root, NODE newnode);
void inorder(NODE root);
void preorder(NODE root);
void postorder(NODE root);
void search(NODE root);

void insert(NODE root, NODE newnode)
{

	if (newnode->data <=root->data)
	{
		if (root->lchild == NULL)
			root->lchild = newnode;
		else
			insert(root->lchild, newnode);
```

```
        }
        if (newnode->data > root->data)
        {
                if (root->rchild == NULL)
                        root->rchild = newnode;
                else
                        insert(root->rchild, newnode);
        }
}

void search(NODE root)
{
        int key;
        NODE cur;
        if(root == NULL)
        {
                printf("\nBST is empty.");
                return;
                                                                                                    }
        printf("\nEnter Element to be searched: ");
        scanf("%d", &key);
        cur = root;
        while (cur != NULL)
        {
                if (cur->data == key)
                {
                        printf("\nKey element is present in BST");
                        return;
                }
                if (key < cur->data)
